

Forgotten Futures Intelligence as Practice

Core Question

Are we building systems that practice intelligence
or systems that simulate it?

Intelligence = Agency

Active resistance to entropy
through purposeful practice

AI Winters as Selection Events

First Winter (1974-1980)

- ✗ Bottom-up learning
- ✓ Rule-based control

Second Winter (1987-1993)

- ✗ Human reasoning
- ✓ Statistical scaling

Each winter selected against emergence, for control

The Road Not Taken

Conway's Game of Life

3 Simple Rules → Universal Computation

[Watch Intelligence Emerge →](#)

Artists Understood

- [Casey Reas](#) - Code practices art
- [Ian Cheng](#) - Autonomous narratives
- [Pierre Huyghe](#) - Living ecosystems
- [Hito Steyerl](#) - Critical AI practice
- [Refik Anadol](#) - Data sculptures

The Doom Economy

Raise billions to protect us from
the systems you're building

Existential risk = funding engine

Two Futures

Intelligence as Service

- Passive consumption
- Atrophying agency
- Centralized control

VS

Intelligence as Practice

- Active collaboration
- Shared agency
- Distributed emergence

Building the Rhizome

RIZOM

The Future of Work is Play

- ∞ Decentralized ecosystems, not hierarchical control
- 🔄 Knowledge flows freely while preserving ownership
- ◆ Collective intelligence from individual autonomy
- ⚡ Human-machine meet in shared practices

We're not waiting for the winter—
we're building the alternative now

yeehaa.io

Living Infrastructure

Knowledge Brains

Personal → Team → Collective
Git-based knowledge that evolves

Algorithmic Trust

Outcome-based certification
Trust without gatekeepers

Open Protocols

HTTP, MCP, ACP standards
No platform lock-in

Ownership Stakes

Franchise model with equity
Own what you build

Capture → Remix → Share → Scale

Intelligence that practices with you

The Question Ahead

Not "How do we build AGI?"
but
"What practices do we enable?"

The next AI winter isn't a crisis to avoid—
it's an opportunity to remember what intelligence actually is:
the practice of creating meaning
